

Sirs,I feel if that if XM radio wishes to broadcast local information they should be allowed and required to do so. Much like the dish network television, they should also be required to broadcast local NPR stations or other local radio stations. I feel if they have the technology to broadcast my local traffic; that same technology can broadcast my local Public Radio and regional FM & AM radio music/news/weather stations. In short, Yes, they should be allowd and required to give local info, but it should be required to offer a varity within this package. Because in rural KY we can't always pick-up the radio signal everywhere we desire which is remidied by XM's broadcast.

Thank You

Tim
